WORD:

## Why do We need It?

Without the internet we would not be able to use email or communicate with family or friends, do online banking, conduct business and research, follow latest news, social media activity, cell phone and numerous other online activities.

**“I have nothing to hide”** they say! Think again, and if you still feel the same way about your security and privacy, send us your email username and password to [securitypriv@protonmail.com](mailto:securitypriv@protonmail.com) that we can read and analyse all your email messages. We do not really want to read your emails and predict that no one will take up this offer, it does however speak for itself.

Our online activity exposes us to considerable risk of our security and privacy.

All the presentations are aimed to equip the individual user with the knowledge and a set of powerful tools to neutralise these very real risks, not only against themselves but also networks they may be required to use e.g. business networks. The curriculum is packed with practical demonstrations. The Online Security and Privacy sessions focus on the numerous ways people with nefarious intentions, commit acts such as stalking, harassment, theft of personal information, fraud and hacking but also explains how they benefit from the data obtained.

Our training and public speaking, are offered in the following formats:

Awareness	1 hour presentation, also offered at no cost to NGO's, public interest organisations and other non-commercial entities.
School Teen Programme (16+ age)	Specially designed for school learners age 16 and older presented over 1½ hours. Presented in a free flowing manner to allow full interaction with the presenter, no adults allowed.
Organisation Presentation	Minimum 1 ½ hour to custom for organisations who have a specific need to be covered.
Applied Workshop	This 1 day workshop takes all aspects of online activity into account raising the bar on skill levels.
Advanced Course	This is a 2 day intensive course for the professional online user who needs a threat proof solution.

# PRIVACY

Presentations are based on an exceptional perspective of cybercrime, security and invasive techniques which fascinate audiences. The PowerPoint part of the presentation is kept to a minimum rather making use of actual live demonstrations. Our team are continuously broadening keynote topics while always updating them with the latest content obtained locally and from around the world.

Audiences will immediately learn how to properly create and store passwords, improve online security, secure their cell phones and computers from online threats, and apply better overall defensive behaviour in regards to technology in the home or at work.

## Topics may include:

Online information risks	Security and privacy prep	Basic computer security
